IV. 閱讀測驗: 10% (2% \times 5=10%)

Most people are either right-handed or left-handed. However, around one percent of people can use both hands equally well, and these people are “ambidextrous.”

According to studies, some people are equally able to perform tasks with both hands from birth. However, scientists believe that not all ambidextrous people are born that way. Some of them were originally part of the ten percent of lefties. When they were kids, they were encouraged to use their right hands to perform daily tasks by adults, but they practiced using their left hands at the same time. Or, they actively learned to use some tools designed for right-handers with their right hands.

People immediately think that ambidexterity has a number of advantages. For example, people who are ambidextrous can simply switch hands if they get tired from doing a task. In sports such as basketball and baseball, players can perform better because they can use either hand when necessary. However, research has shown that ambidextrous children are more likely to have learning difficulties with reading and writing. They are at a higher risk of mental health problems, too. Therefore, they may need attention and special assistance from parents and teachers.

In spite of the problems that some ambidextrous people may encounter, being **adept** in the use of both hands certainly brings many advantages. Would you like to be ambidextrous?

41. According to the passage, ambidextrous people are people who _____.
- (A) have mental health problems
 - (B) have no hands at birth
 - (C) are good at using both hands
 - (D) are good at learning everything
42. According to the passage, ambidextrous people may have an advantage in _____.
- (A) a swimming competition
 - (B) a speech contest
 - (C) a marathon race
 - (D) a basketball game
43. It has been found that an ambidextrous child may have difficulty _____.
- (A) paying attention
 - (B) reading
 - (C) playing baseball
 - (D) singing
44. The word “**adept**” in the last paragraph means “_____.”
- (A) skilled
 - (B) regular
 - (C) precious
 - (D) common
45. What can we infer from this passage?
- (A) No one is interested to know what has caused ambidexterity.
 - (B) Ambidextrous people are not welcomed at school.
 - (C) Some left-handers were encouraged to write with their right hands.
 - (D) Ambidextrous people were all right-handers when they were little.
